

Erasable!
How
mysterious!

How can you erase ballpoint pen ink?

So how does it work?

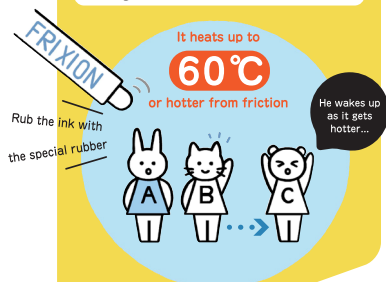

01

Ink on paper

02

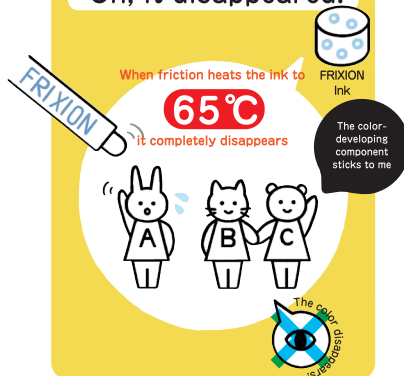

If you rub the ink...

The color begins to disappear...

03

Oh, it disappeared!

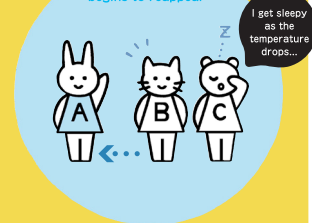

The Erased Color Reappears?

04

As the temperature drops below

-10°C

the color begins to reappear

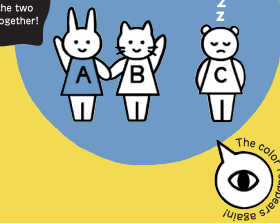

05

And when the temperature drops below

-20°C

The color comes alive again with the two of us together!

You can see the color clearly!!

Heat makes
the FRIXION ink
disappear!
